

Sergey Hayriyan

Software Engineer

Yerevan, Armenia | sergdevone@gmail.com | slateblua.github.io | linkedin.com/in/sergey-h
github.com/slateblua

Summary

Software Engineer with 2 years of production experience building large-scale products with millions of daily users. Strong foundation in Java, Kotlin, object-oriented design, profiling and performance optimization. Experienced in gameplay development, performance and stability improvements in mobile environments.

Experience

Software Engineer II, Rockbite Games – Yerevan, Armenia Nov 2025 – Mar 2026

- Reduced client memory usage by ~20% and cut ANR rates by profiling runtime performance with IntelliJ Profiler and VisualVM, stabilizing gameplay for users on resource-constrained devices.
- Optimized engineering workflows using GitHub Actions, automating monitoring, failure notifications, and task management to shorten production feedback loops.
- Mentored junior developers and authored developer-facing documentation, including onboarding guides and internal runbooks

Software Engineer I, Rockbite Games – Yerevan, Armenia May 2024 – Nov 2025

- Enabled player personalization for Idle Outpost (50M+ downloads) by implementing a character customization system.
- Built client-side live-ops systems enabling remote content updates and balance adjustments without requiring new client releases.
- Integrated and maintained third-party SDKs for advertising (AppLovin), authentication (Firebase), and analytics (AppsFlyer) to support data-driven live-ops.

Open Source

Created MathType, an open-source scientific typing plugin for Obsidian with 3,000+ downloads.

Contributor to LibGDX (25.3k GitHub stars), a widely-used cross-platform game development framework.

Education

American University of Armenia, B.S. in Computer Science – Yerevan, Armenia May 2027

- Relevant coursework: Data Structures, Algorithms, Database Systems, Game Development, Game Design
- Mathematics: Calculus, Linear Algebra, Probability, Statistics, Numerical Analysis, Mathematical Modeling

Skills

Languages: Java, Kotlin, C++, Lua, TypeScript

Game Development, Gameplay Systems, Performance Profiling: LibGDX, Unity, Love

Backend: Spring, Ktor, Firebase, Supabase

Tools: Git, GitHub Actions, Gradle, IntelliJ Profiler, VisualVM, Firebase, Android Studio

Languages

Russian (C2), Armenian (C2), English (C2), German (B1)
