Summary

Software engineer with 2+ years of production experience building performance-sensitive applications used by tens of millions of users. Strong foundation in Java, Kotlin, object-oriented design, asynchronous programming, REST APIs, data-driven systems, profiling, and production maintenance.

Experience

Software Engineer (Junior to Middle), Rockbite Games – Yerevan, Armenia May 2024 – Mar 2026

Solved production engineering problems for Idle Outpost, a live mobile product with 50M+ downloads and tens of millions of dollars in global revenue.

- Built REST communication layers with structured data exchange and validation, reducing integration risk across backend-driven product flows.
- Designed gameplay-facing systems, progression logic, and data-driven workflows that helped teams ship and tune content faster.
- Integrated ads, authentication, analytics, and attribution SDKs while protecting release stability in a high-scale mobile environment.
- Profiled runtime behavior and reduced memory usage by about **20%**, improving stability on constrained mobile devices.
- Instrumented analytics, including AppsFlyer event pipelines, so product teams could evaluate player behavior and live-ops changes.
- Reproduced player-reported issues, supported beta releases, and contributed CI/CD improvements to shorten production feedback loops.

Education

American University of Armenia, BS in Computer Science, Philosophy – Yerevan, Armenia May 2027

- Relevant coursework: Computer Science with Java, Object-Oriented Programming (Java and C++), Data Structures, Algorithms, Mobile Application Development, Game Development.
- Additional coursework: Software Engineering, Database Systems, Statistics, Probability, Understanding Data.
- Strong performance in philosophy and writing-intensive humanities courses, supporting clear technical communication.

Skills

Languages: Java, Kotlin, C++, C#, Lua, SQL

Software Engineering: Object-oriented programming, functional programming, design patterns, algorithm design, asynchronous programming

Server: REST APIs, HTTP, Spring, Ktor

Tooling: Git, GitHub, GitHub Actions, CI/CD workflows, Gradle, Linux, Profiling

Languages

Russian (C2), Armenian (C2), English (C2), German (A2)
